

Test Assignment

DEAR APPLICANT,

Welcome to the Zimran IT School selection process. This assignment is your first step towards joining our 4-week program, where you'll explore how tech products are built and scaled across Market Research, Analytics, Marketing, Operations, Product and AI.

We want to see how you think, approach a challenge and turn your ideas into action.

You have 72 hours to complete the assignment.

Good luck 🤗

ZIMRAN
IT School

TASK 1 - INTRO

BUSINESS MODEL

We'd like to see how you think about business and translate observation into actionable insights.

We'd like you to analyze **Spotify** ([link](#))

Your goal is to reverse-engineer how this company acquires, converts, and retains customers - and to identify what we could learn from them.

TASK 2 - TASK

BUSINESS MODEL

1. **Business model overview (brief)** — Who is the customer, what is the value proposition, how does the company make money, and what is the pricing structure? Keep this section short — it's context for the rest of the analysis.
2. **Key metrics** — Identify Spotify's key metrics and show YoY change. How do they compare to industry benchmarks, and is that good or bad?
3. **Why the margin is what it is** — Explain in your own words where most of the revenue goes. Wrapped, Family plan, win-back offers): how it works and which metric it moves.
4. **Acquisition** — Which acquisition channels are they using? Where do they invest most? Do they rely heavily on paid social ads? If not, why?
5. **Funnel** — What are the top 3 most effective things they use to convert users from free to Premium?
6. **Retention** — Break down one mechanic they've implemented (Discover Weekly, Wrapped, Family plan, win-back offers): how it works and which metric it moves.

TASK 2 - INTRO

WHICH PARTNER IS WORTH THE MONEY?

Imagine we have business named "zimran.test" which buys traffic on a CPA model — it pays partners for each lead. A lead is a registered user who is: male, 35+, from the US, Canada, UK, Australia, or New Zealand.

Payout per lead: \$9.00 desktop, \$3.50 mobile.

As a test, the "zimran.test" also tried a CPC model — paying \$0.33 per click to its landing page.

A week ago, "zimran.test" started working with two partners:

Partner №1 — CPA model (desktop + mobile campaigns)

Partner №2 — CPC model

The first week's results are in this [Data sheet](#)

TASK 2 - INTRO

HOW TO MAKE THE DECISION?

“zimran.test” needs to decide whether to keep working with each partner. The decision is based on projected 6-month income vs. traffic costs, i.e. ROI.

ROI = (Income for 6 months – Costs) / Costs
If ROI > 0% → keep working with the partner.

Income for 6 months =
Income for week0 × return multiplier

Return multiplier (week0 → month6): 8.3 for desktop users, 4 for mobile users.

A partner's income is what we pay them for referred users; their expenses are the ad budget they spent on the campaign.

TASK 2 - TASK

WHAT TO DELIVER?

Make a copy of the Google Sheets file and:

1. Fill in Table 1 using the Data sheet and answer the following questions:

- ✦ Why do landing page conversions differ between campaigns?
- ✦ Which partners should we keep, and which should we drop or optimize? Justify with numbers.
- ✦ How can these campaigns be optimized? Concrete actions, not general ideas.

2. Fill in Table 2 and answer the following questions:

- ✦ For which partners is it profitable to keep working with zimran.test, and for which should they stop sending traffic?
- ✦ What ways to optimize the campaign would you suggest?
- ✦ How could the optimization changes from Table 1 affect the results in Table 2?

DOCUMENT STANDARDS

DELIVERABLES:

```
graph TD; A[DELIVERABLES:] --> B[Task 1 — Presentation (Canva / PDF)]; A --> C[Task 2 — Completed Excel file + answers to the questions (either in the same Excel file or in the Task 1 presentation)];
```

Task 1 — Presentation
(Canva / PDF)

Task 2 — Completed Excel file +
answers to the questions (either
in the same Excel file or in the
Task 1 presentation)

Your presentation should be clear and show how deep you dug in.
Please include links to any external resources you used.

Good luck!
